

Data Breaches

Privilege Misuse

In 2021, data breaches were exclusively carried out by Internal actors, where the aim was focused on financial gains –other data breaches were based upon grudge and espionage.

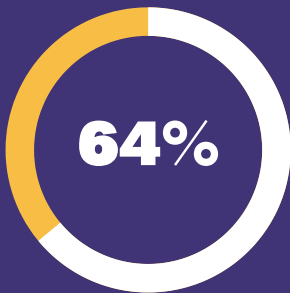

Common Variety

Privilege misuse correlates with privilege abuse. Reports show that internal actors, though infrequently, work within Partners with financial motivations behind internal threats.

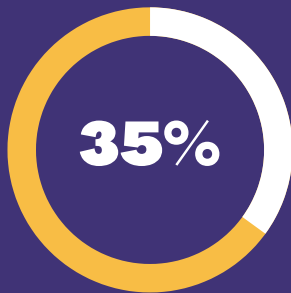

DATA COMPROMISE

PERSONAL

Identifiable information of an individual

MEDICAL

Health-related information associated with patient care

INTERNAL

Information regarding organization

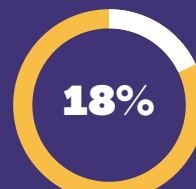

Though misuse breaches can be difficult to detect, reports show that non-privileged misuse cases are easier to discover.

Healthcare organizations need to remain vigilant against insider threats and required to hold detective controls over all kinds of misuse.
